LikeHome Lofi Prototype Handoff

Oct 14, 2026

Global layout

Every page sits inside one **Page frame**: the banner on top and a purple gradient band on each side.

Banner

- LikeHome logo in the top left; clicking it goes to Home.
- Signed out: a **Sign in** button on the right.
- Signed in: **MyBooking** and **Account** buttons replace Sign in. MyBooking only appears when signed in.
- A **dark mode toggle** (moon icon) sits beside the buttons in both states.
- The current page's button is highlighted (for example, Account on the Account page).

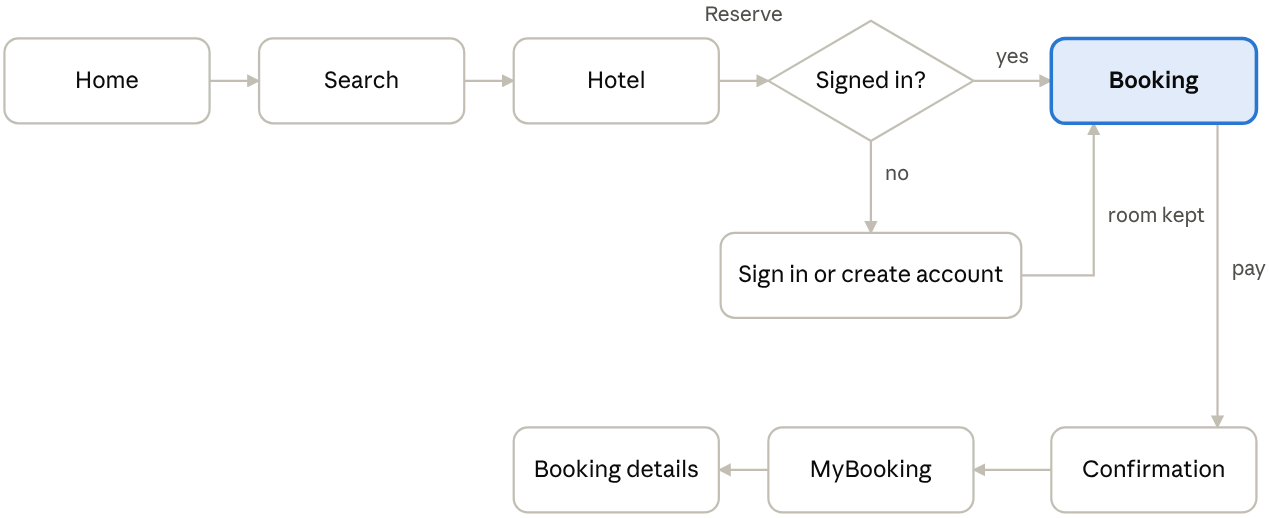

Side gradient (Option A: scroll depth)

- Each side band is about 15% of the page width.
- The gradient runs **top to bottom along the full page length**: white at the top of the page, fully purple at the bottom.
- As users scroll, the color beside the content shows roughly how far down the page they are.
- Keep the content area in the middle plain so text stays readable.
- In Figma, show this with two or three frames of a long page at different scroll points.

User flows

Link the Figma frames in this order. The banner also reaches Home, MyBooking, and Account from any page.

Signed-out users sign in, then return to Booking with their room kept

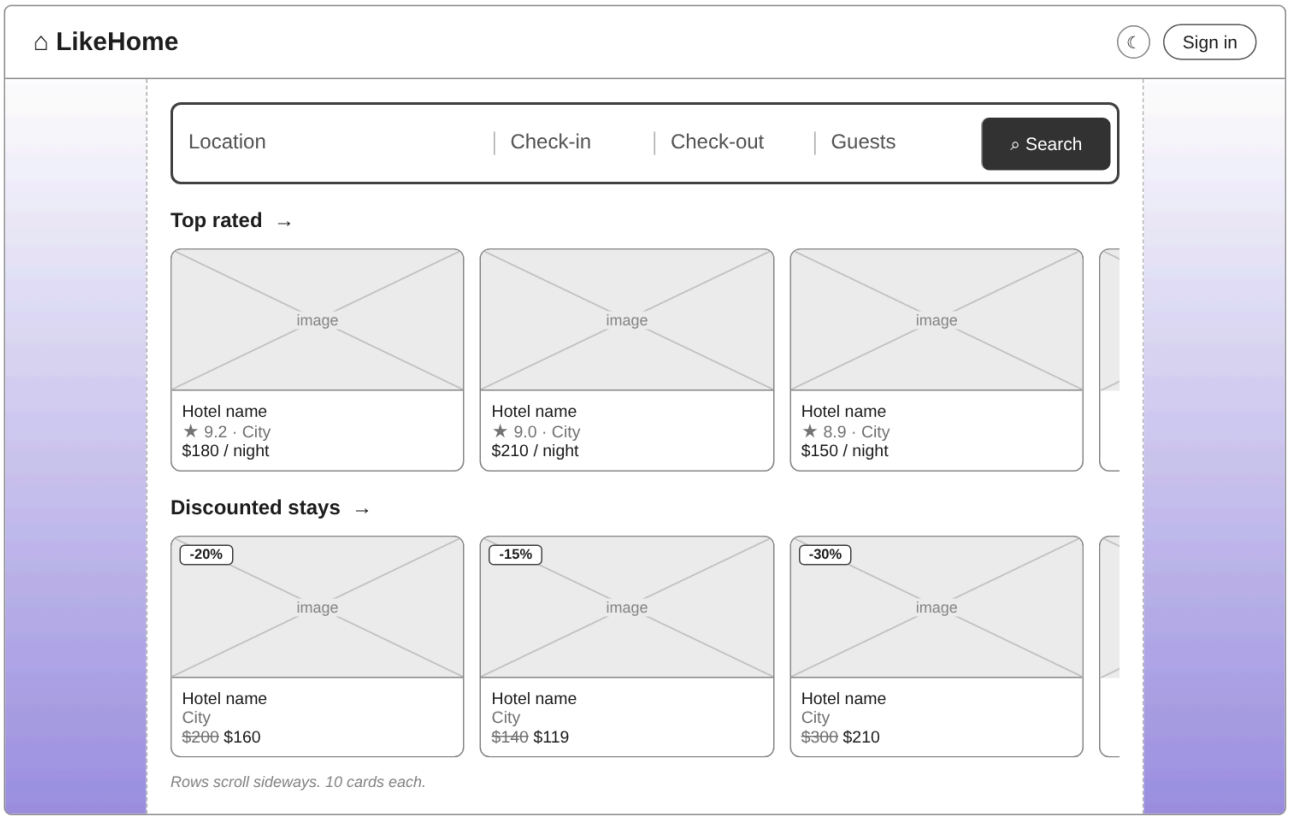

main booking flow · 8 screens, 1 decision

If the chosen dates overlap another stay, the Overlapping stay popup appears on Booking before payment. Book now on MyBooking returns to Home, and Sign out on Account returns to Home signed out.

Pages

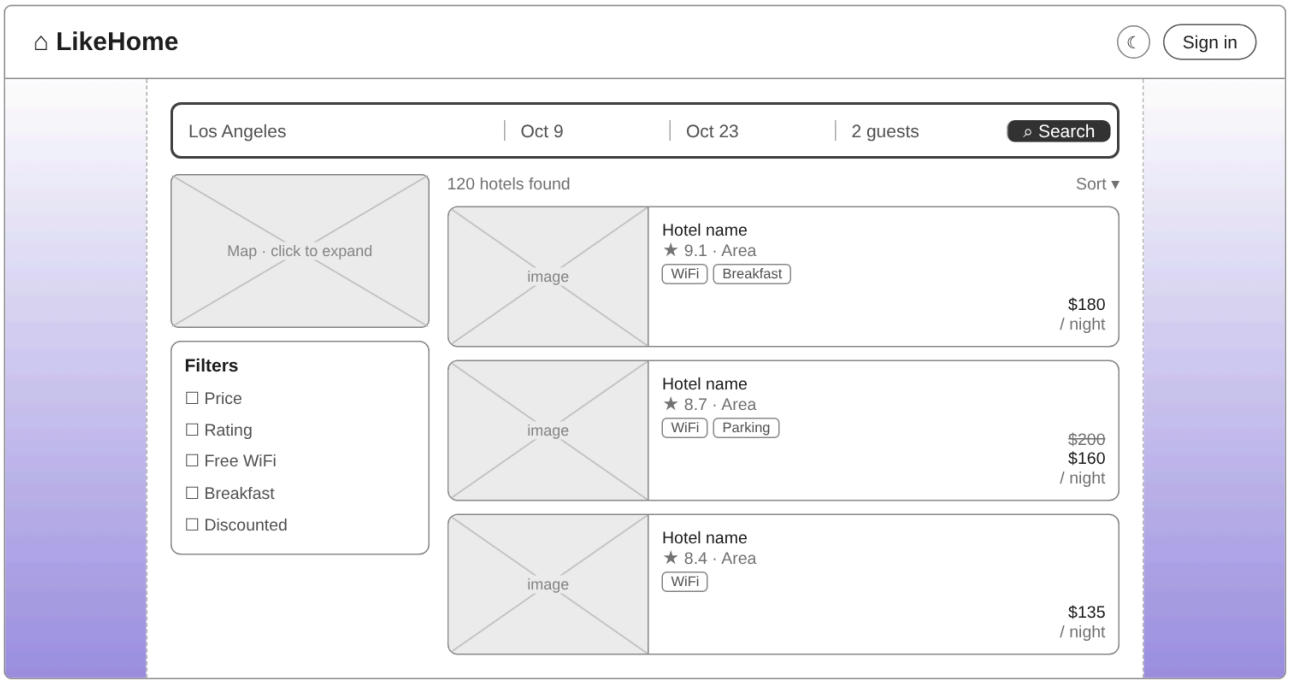

Twelve desktop screens, in the order a user meets them. Every page uses the Page frame from Global layout.

Home

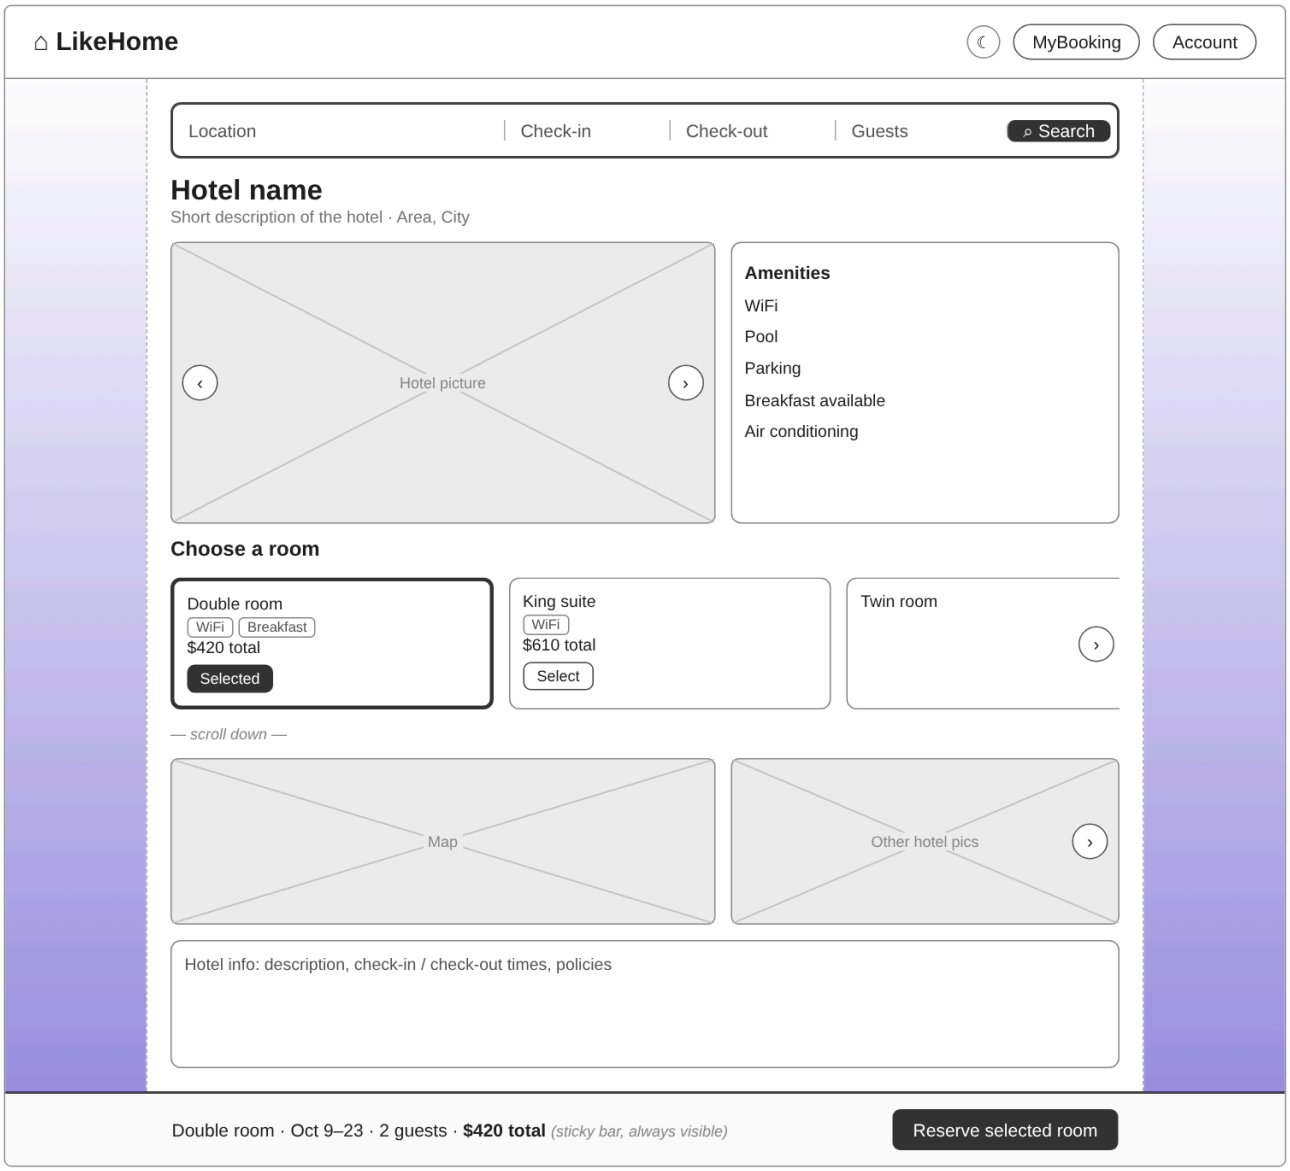

- The search bar is the biggest element on the screen, at the top. Search goes to the Search page.
- **Top rated:** the 10 highest-rated hotels as image cards in a row that scrolls sideways.
- **Discounted stays:** 10 discounted hotels in the same style, below Top rated. Discounts come from the hotels API.
- Each card opens that hotel's Hotel page.

Search

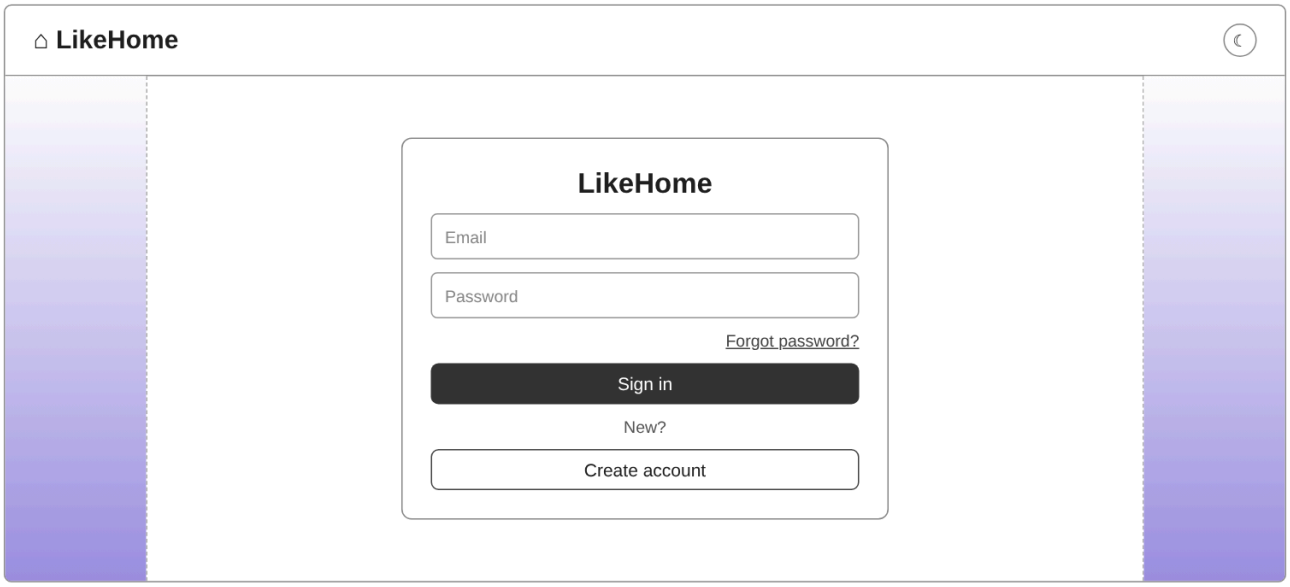

- Two columns: map and filters on the left, hotel result cards on the right.
- The compact search bar shows the current search so users can edit it in place.
- Clicking the map preview opens a full-size map, like Google Maps.
- A results count and a Sort dropdown sit above the cards.
- Each result card shows image, name, rating, area, amenity tags, and nightly price. Clicking it opens the Hotel page.

Hotel

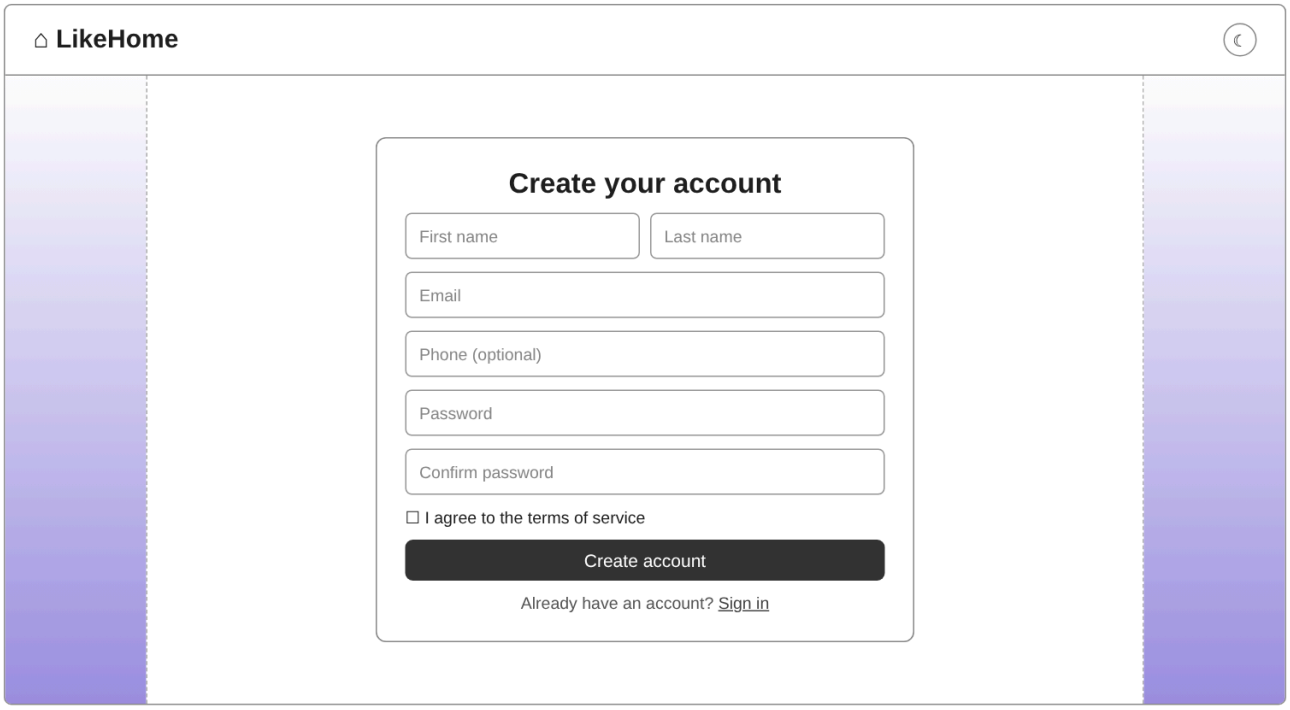

- One scrolling page: users scroll down for the map, more photos, and hotel info.
- Hotel name and short description at the top, then the photo carousel with the amenities box beside it.
- **Choose a room:** a sideways carousel of room options. Each has its own price, amenity tags, and a Select button. The selected room gets a thick border.
- Users change dates and guests through the search bar.
- The **Reserve selected room** bar is sticky: it stays pinned to the bottom of the screen and repeats the room, dates, guests, and total.
- Signed-out users who click Reserve go to Sign in first (see User flows).

Sign in

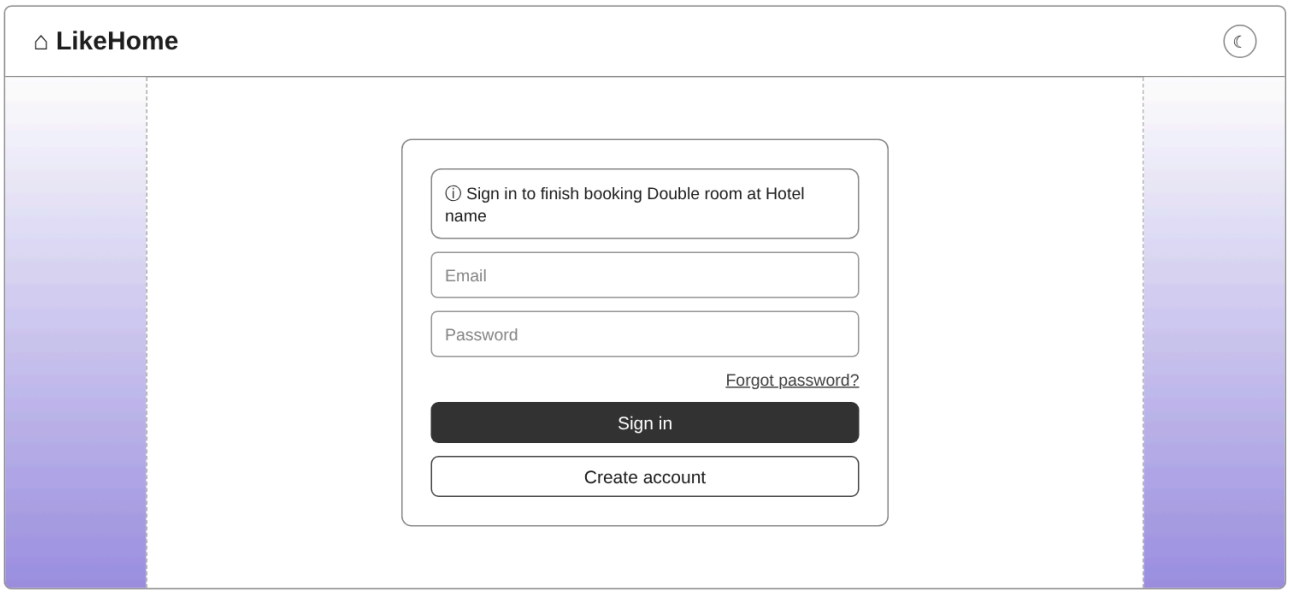

- A standalone page, not a popup. Everything centered, no extra decoration.
- Email, password, **Forgot password?** link, Sign in button, and a Create account button for new users.

Create account

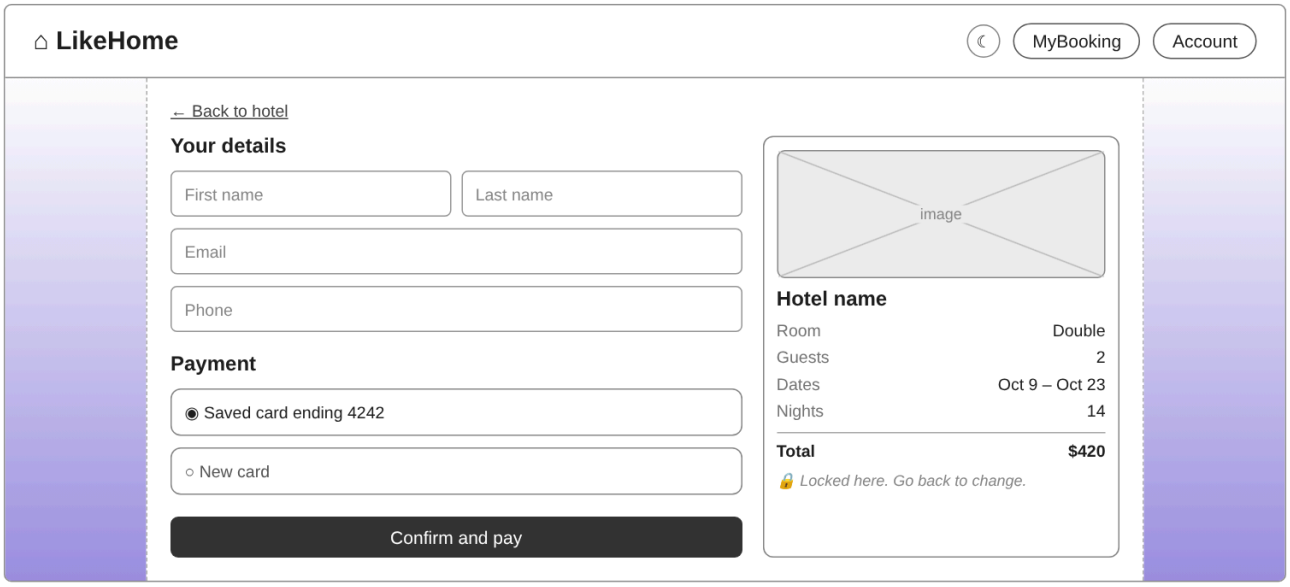

- Same centered card as Sign in.
- First and last name, email, optional phone, password, confirm password, and a terms of service checkbox.
- Links back to Sign in for existing users.

Sign in while reserving

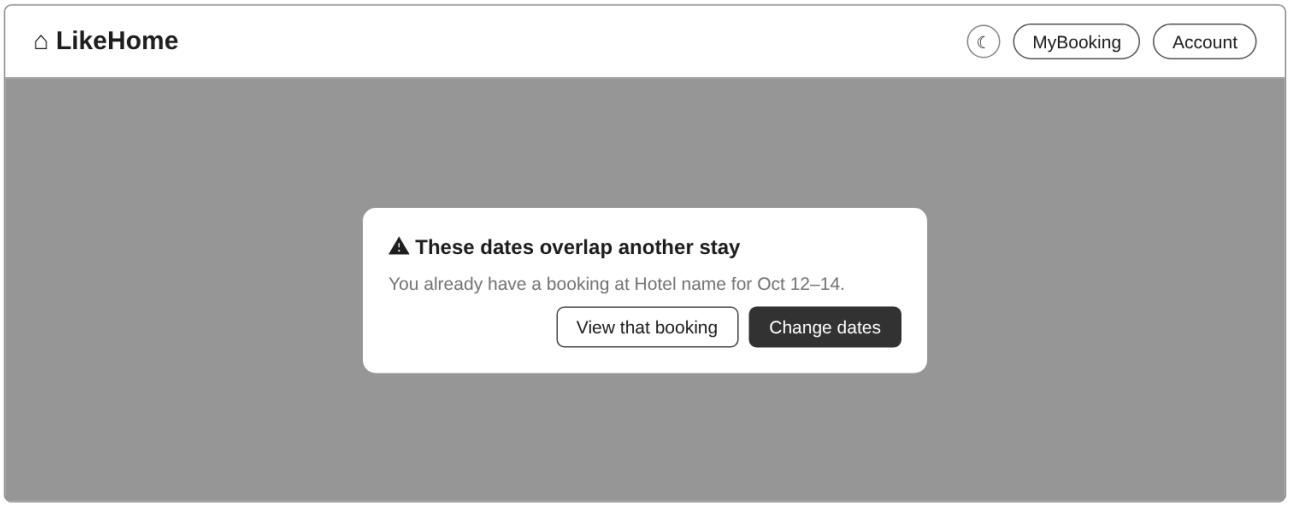

- The Sign in page with a note naming the room the user is trying to book.
- After signing in or creating an account, the user lands on the Booking page with that room still selected.

Booking

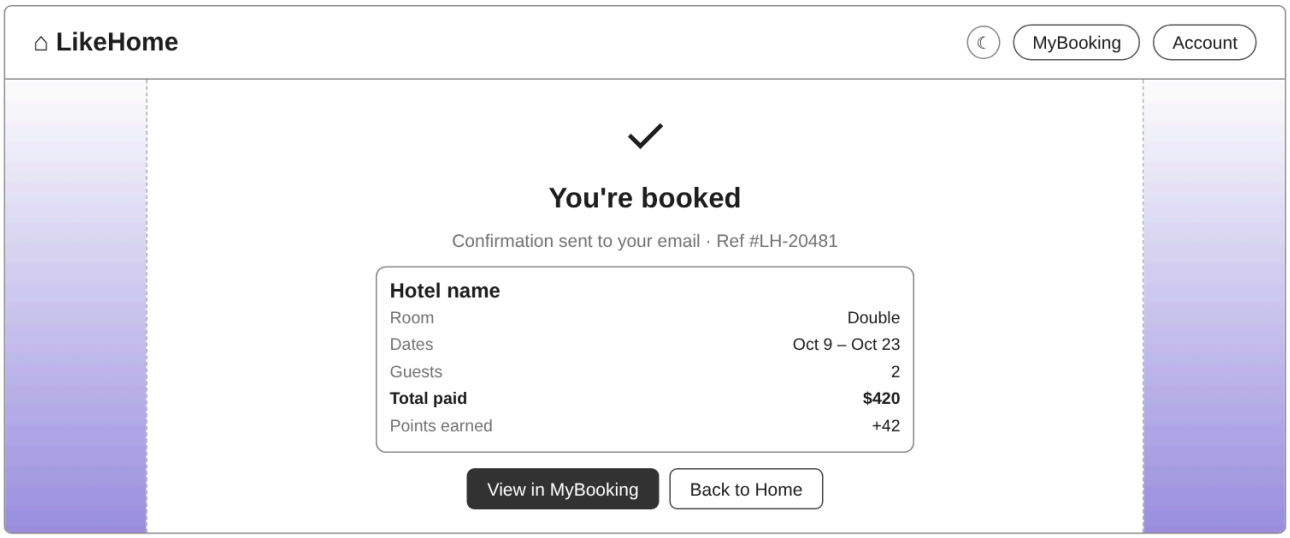

- Making the reservation and paying.
- Left: guest details form and payment choice (saved card or new card), then **Confirm and pay**.
- Right: hotel details and total price, showing room type, number of guests, dates, number of nights, and total.
- Booking details are locked here. To change them, users go back to the Hotel page.

Overlapping stay popup

- Appears on Booking when the chosen dates overlap another of the user's stays (OO-07).
- Names the conflicting booking and offers **Change dates** or **View that booking**.

Booking confirmation

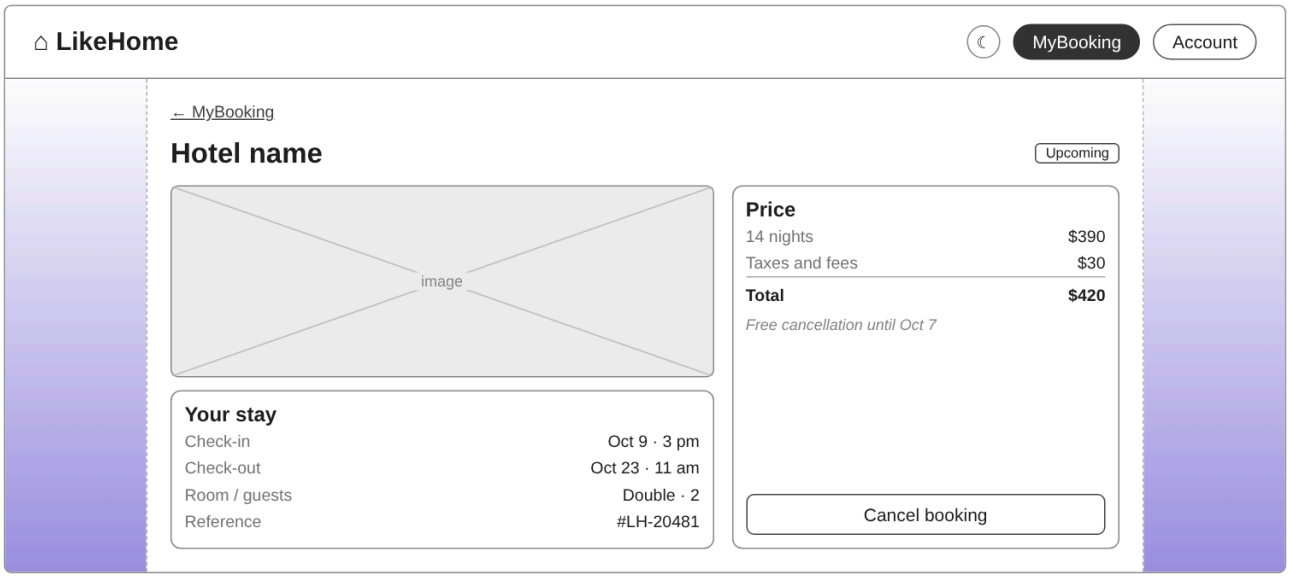

- Shown after Confirm and pay succeeds.
- Reference number, booking summary, total paid, points earned.
- Buttons: View in MyBooking and Back to Home.

MyBooking

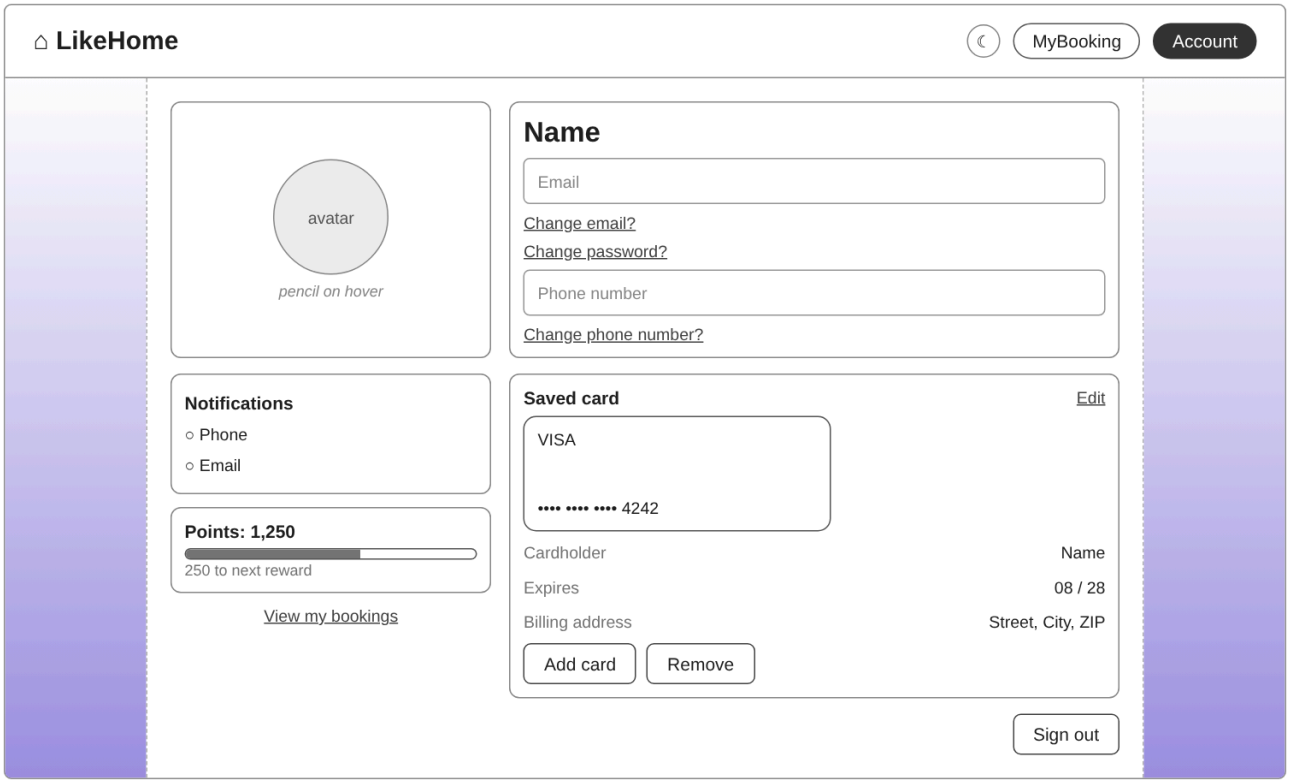

- Holds all of the user's bookings. Only reachable when signed in.
- Points card with a progress bar toward the next reward.
- Large tabs with short labels: All, Upcoming, History.
- Each booking card shows image, hotel name, status tag, dates, guests, total, and points earned. Clicking it opens Booking details.
- The end of the list says "That's all you have" with a **Book now** button that goes to Home.

Booking details

- Opened from a MyBooking card, with a back link to MyBooking.
- Status tag, photo, stay details (check-in, check-out, room, guests, reference), and price breakdown.
- Cancellation deadline and a **Cancel booking** button, shown only on Upcoming bookings.

Account

- Shows name and contact information.
- Avatar on the left: hovering shows a pencil, and clicking it lets the user change the image.
- Change links for email, password, and phone number.
- Left column: notification preference (phone or email), rewards points card, and a link to MyBooking.
- Right column: the saved card panel, stretched to match, with card, cardholder, expiry, billing address, and Edit, Add card, and Remove actions.
- **Sign out** button at the bottom of the page.

Components

Build each component once in Figma, with every state shown here as a variant. Pages are then assembled from these.

Component	States / variants	Used on
Banner	Signed out, signed in, current page highlighted	Every page
Side gradient band	One (white top to purple bottom)	Every page
Search bar	Large, compact	Home, Search, Hotel
Hotel card	Top rated, discounted, search result	Home, Search
Map preview and filter panel	Preview, expanded map	Search, Hotel
Room option	Default, selected	Hotel
Sticky reserve bar	One	Hotel
Price summary and payment choice	Saved card, new card	Booking
Booking card, status tags, tabs	Upcoming, completed, cancelled	MyBooking, Booking details
Points card and avatar	Avatar default, avatar hover	Account, MyBooking
Saved card panel	One	Account
Form elements	Input, checkbox, radio, primary and secondary button, link, tag, dark mode toggle	Every page
Popup	One	Booking

Theme variables

All colors are Figma variables named by their role, so the theme can change later and dark mode works by switching one setting. Never apply a raw hex color to a design.

Setup in Figma:

1. Create a variable collection named **Theme** with two modes: **Light** and **Dark**.
2. Add the variables below. The values are placeholders until the team settles on a theme.
3. Apply only these variables to fills, strokes, text, and gradient stops (Figma lets you bind color variables to gradient stops).
4. To preview dark mode, select a frame and switch its mode to Dark.

Variable	Used for	Light	Dark
bg/page	Page background, gradient top	White	Near-black (#121212)
bg/edge	Gradient bottom	Purple	Deep purple
bg/surface	Cards, panels, popups	White	Dark gray
text/primary	Headings and body text	Near-black	Near-white
text/muted	Labels, hints, secondary text	Gray	Light gray
accent	Primary buttons, links, selected states	Purple	Lighter purple
border	Card and input outlines	Light gray	Mid gray
status/success	Confirmed, completed	Green	Lighter green
status/error	Errors, cancelled	Red	Lighter red

In code, the same names become CSS variables, and the dark mode toggle switches them by setting `data-theme="dark"` on the page.Save the choice so it sticks between visits.
